

Three – layer blowing machine for PE-LD film

This technology is designed for usage of PE recycled material for horizontal production of continuous film sleeve which can be further adjusted for needs of packing technology in food-processing industry and other branches.

Approximate technical data:

- _ input material 100% recycled PE granulate
- _ width of film 1200 - 1500 mm
- _ thickness of film 0,01 – 0,1 mm
- _ output 150 kg/h
- _ nominal electric output 102 kW
- _ weight 6.200 kg
- _ dimensions (m) 7 x 4,8 x 6,8
- _ spiral form of type „LAUER" with continuous 360° rotation
- _ exchange of sieves is designed with regard to maximal safety and reliability
- _ part of this technology can be additional equipment (measuring equipment, vertical cutter, solving of collection of waste during production, chilling above standard etc.)
